**Artificial Intelligence**  
**Assignment1**  
**Structures and strategies of state space search**

|                                                           | Mark Division |
|-----------------------------------------------------------|---------------|
| 1. Group Formation and topic finalisation.                | 0             |
| 2. State Space representation and submission.             | 2             |
| 3. Coding using:                                          |               |
| a) Uniformed Search(BFS/DFS/IDFS)                         |               |
| b) Hill climbing                                          |               |
| c) Best first search                                      |               |
| d) A*                                                     |               |
| e) Mini-max search & Alph-beta pruning (2 agent games)    | 4             |
| 4. Performance analysis of the different algorithms used. | 2             |
| 5. Presentation                                           | 2             |
| 6. Video creation and sharing the link in eduserver.      | 3             |
| 7. Peer Review by 5 groups.                               | 2             |
